

## TE - Service platforms for double membrane roofs

### Product description

Service platforms for double membrane roofs are planned and manufactured individually and depending on the task. Service platforms are attached to the tank wall, making it easy to retrofit pipe connections and sensor mounts when converting tank covers or retrofitting double membrane roofs on concrete tanks. Service platforms can also be designed and used for service work on submersible mixers.

### Facts

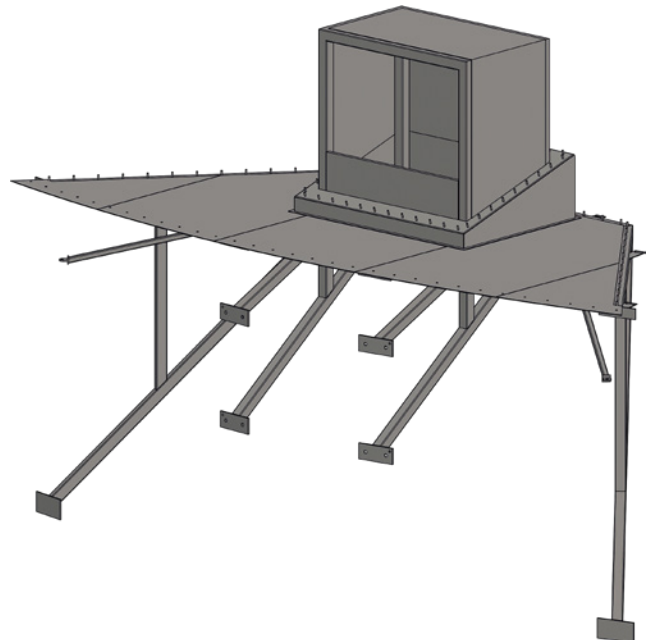

- Made entirely of stainless steel
- Enables pipe connections and sensor mounts to be retrofitted
- Enables accessibility to submersible mixers for service work
- Robust and durable design
- Individual and tailor-made solution
- Customer-specific planning and design

### Areas of application

- For concrete containers
- Suitable for all roof shapes

### Options & variants

- Pipe connections up to diameter 400
- Sensor mounts with threaded or flanged connections
- Maintenance openings
- Installation by our specialised personnel

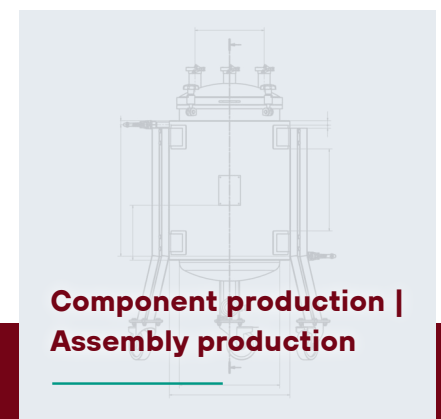

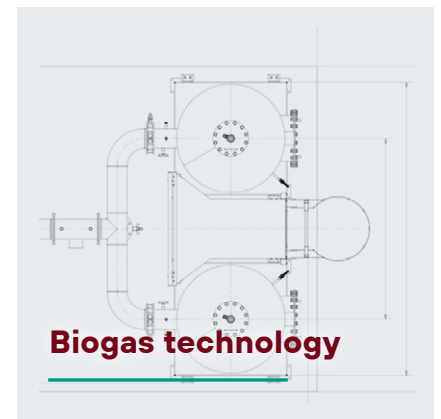

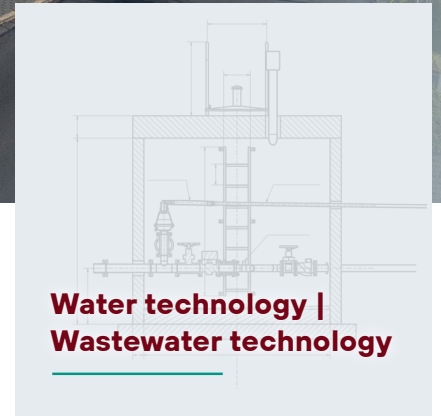

### Our certifications

- Specialist company according to German Water Resources Act (WHG)
- Pressure Equipment Directive AD 2000 HPO
- DIN EN ISO 3834-2
- DIN EN 13445-4

## **Your partner for all tasks** in pipeline and plant construction

### **We convince**

With over 30 years of experience in handling and processing stainless steel, we are highly specialised in pipeline and plant construction for environmental and supply technology. We attach particular importance to close and trusting cooperation with our customers. Thanks to our many years of experience and our extensive know-how, we can offer individual solutions and therefore meet the expectations of our customers.

**We would be happy to make you an individual offer.**
